McAfee Customers to Benefit from TeraDactor™ Suite of Content Security Tools

MISSOULA, Mont., March 20, 2012 /PRNewswire/ -- TeraDact Solutions, Inc. today announced that it has joined the McAfee® Security Innovation Alliance (SIA) partner program. As part of its participation in the McAfee SIA program, TeraDact will integrate its TeraDactor™ suite with McAfee® ePolicy Orchestrator® (McAfee ePO™) software, enabling customers to scan all hidden data and information contained in electronic documents and effectively secure documents in the information sharing process.

TeraDactor's integration with McAfee ePO software will enable customers to effectively manage content sharing policies, compliance auditing, collaborative content review, and content checking and redaction processes across multiple repositories and workflows. With TeraDactor's granular approach to producing sanitized documents tailored according to audience, customers are assured protection against potential costs and repercussions resulting from a data breach or non-compliance.

"Data leakage, whether intentional or inadvertent, is a growing problem in a world that shares high volumes of electronic data daily," said TeraDact CEO Chris Schrichte. "By utilizing TeraDactor's ability to manually or automatically check, version, and release the right information to the right audience at the right time, and by doing this in conjunction with McAfee ePO software, customers can be confident that sensitive information they share will be secured."

"As one of the few small technology businesses headquartered in Montana, serving the Data Security and Privacy sector, we are pleased to add TeraDact Solutions to the McAfee Security Innovation Alliance," said Ed Barry, vice president of the Security Innovation Alliance, McAfee. "Our customers face growing challenges to protect their data, and the integration between ePolicy Orchestrator software and TeraDactor™ adds innovative and complementary data protection functionality for mutual customers."

The McAfee ePO platform is the first to let enterprises and governments centrally manage security and compliance products from multiple vendors, offering unprecedented cost savings and return on investment. With more than 45,000 customers and managing over 60 million PCs and servers, this unique platform is helping McAfee SIA partners to extend their reach and create complementary functionality.

About TeraDactor

TeraDactor is an embeddable Web-based proprietary solution that gives organizations effective control of complex document formats and the data contained within them. TeraDactor exposes all visible and hidden content to reviewers, automatic rule sets, and third party software to enable a collaborative review process in which reviewers and potential recipients of reports receive only the appropriate document contents and paragraphs. The TeraDactor integration toolset allows information managers to leverage TeraDactor for a wide range of missions from real-time compliance checking to fine-grained information control and release of sensitive information to appropriate persons. TeraDactor's Universal Viewer embeds into any application and leaves all classifiers and their release conditions under application control while extending this control to every review mark.

About TeraDact Solutions, Inc.

TeraDact Solutions' (www.teradact.com) toolset challenges current sensitive document and information management and sharing policies. Its technology allows information managers to check, version, and release the right information to the right audience at the right time. TeraDact is headquartered in Missoula, MT, with offices in Washington, DC, and Edmonton, Alberta. For more information, please visit www.teradact.com.
