

**DriveSavers Data Recovery Services Available for New Apple MacBook Air**  
**Tuesday, August 09, 2011 12:00:00 PM (GMT)**

*DriveSavers has successfully recovered more data from flash memory-based devices than any other data recovery company*

DriveSavers, the worldwide leader in [data recovery](#) services, today announced the company's data recovery services are available for the newest version of the Apple® MacBook Air. DriveSavers Data Recovery Advisors are available 24/7 to help users recover files from a MacBook Air, should data loss occur.

DriveSavers was the first company to successfully perform [iPhone data recovery](#). Like the iPhone and iPad, the newest version of the MacBook Air uses Flash-based memory technology, which improves speed, uses less power, is more resistant to shock and decreases the weight of the device. However, Flash-based technology can be compromised by user error, mismanagement and software or hardware failure – making a user's precious data such as documents, videos, digital photos and music vulnerable if the MacBook Air hasn't been backed up.

Featuring the most technologically advanced data recovery service to Apple users, DriveSavers has successfully completed more recoveries on Flash memory-based solid-state devices than any other [data recovery company](#). With over 25 years of experience recovering data for Apple products, DriveSavers data recovery engineers are able to recover data from MacBook Air, iPads, iPhones and iPods that have suffered common and catastrophic data loss.

"The MacBook Air is yet another popular Flash-based device from Apple that has changed how consumers create and store their precious data," said Mike Cobb, director of engineering at DriveSavers Data Recovery. "As the MacBook Air continues to gain popularity and become more entrenched in consumers' everyday lives, the vulnerability of these laptops also increases – accidents happen. With over 25 years of experience successfully recovering data from Flash memory-based products, including the MacBook Air, DriveSavers is an expert in data recovery for Apple products."

DriveSavers is the only data recovery company in the world that posts proof of annual, company-wide SAS 70 Type II Audit Reports, the Corporate Industry's standard for an overall control structure. Every iPhone data recovery process adheres to stringent data security protocols and is conducted in the safest data recovery environment available. High Security Service is also available for customers who require extra precautions.

DriveSavers Data Recovery Advisors are available 24/7 to help users recover files from the new MacBook Air, should data loss occur. DriveSavers MacBook Air data recovery services are now available to consumers worldwide.
