

Datacastle Brings Enterprise Endpoint Backup to the IBM Cloud Platform
Monday, April 28, 2014 08:00:00 PM (GMT)

SEATTLE, April 28, 2014 /PRNewswire/ -- Datacastle today announced a partnership with IBM that brings the power of Datacastle RED to the IBM Cloud marketplace. Starting today, IBM clients can quickly and easily procure Datacastle's industry leading enterprise endpoint backup and recovery solution hosted on IBM SoftLayer.

Datacastle RED transforms vulnerable mobile workforce data into resilient endpoint data. Datacastle RED uniquely provides highly performant and secure hybrid cloud backup and recovery with QuickCache™ running on NAS devices deployed at remote offices, home offices, or the corporate LAN. Coupled with Datacastle's advanced RoamSmart™ technology, security suite, and enterprise integration APIs (AD/LDAP/SAML), Datacastle RED is recognized as the industry leader in performance, secure data deduplication, and cloud storage flexibility.

The IBM Cloud marketplace offers clients access to more than 100 SaaS applications, IBM's Bluemix platform-as-a-service with its suite of composable services, the powerful SoftLayer infrastructure-as-a-service and IBM's rich intellectual capital and deep industry expertise. This single online destination with a suite of cloud services delivers a new buying experience for clients that enables line of business professionals to deploy new services faster; allows developers to build them with greater speed; and offers IT departments more creative, efficient and lower-cost ways to deliver these services.

"Datacastle's enterprise customers are looking for a cloud partner that meets their stringent security, performance, and reliability requirements," said Craig Blessing, Datacastle VP of Sales and Business Development. "The partnership between IBM and Datacastle provides IT decision makers more enterprise-class cloud deployment options for a global and scalable solution to back up and protect the data on laptops, high end tablets, and desktops."
